FynHelp retest guide

Plain steps, no technical knowledge needed. Prepared 13 Nov 2026. Takes about 45 minutes.

What this is. FynHelp reads a bank statement, checks that it is complete, and lines it up against the client's books. You told us it could not read most of your statements. We have fixed that. This guide asks you to try the **same files again** and tell us what you see, good or bad.

You cannot break anything. Use the test clients you already made. If something looks wrong, that is exactly what we want to hear about.

Before you start

1. Open **www.fynhelp.com** and sign in with the same account as last time.
2. Have your 11 bank statements ready (the same ones as before, from the shared Drive folder "FYNHELP X DEVI PRASAD").
3. Keep a notepad open. For every test, write down: **Pass** or **Fail**, a screenshot, and the **exact words** on the screen if something looks wrong (copy them, do not retype from memory).
4. If a statement was already uploaded last time, **delete it first** or upload it again on a fresh client, so you are testing the new version.

Test 1: Do the bank statements read now? (most important)

This is the problem you reported. For each file below: go to **Documents**, press **Upload**, choose the client the statement belongs to, choose the file, and wait. Big ICICI files can take up to a minute. Then click the file's name to open it.

What you should see for every file

1. The file's status says **Parsed**. It must not say **Failed**, and there must be no red **Held** box.
2. A box called **Statement check** appears. Near the top it says **"Lines read from the file: N"**. Compare N with the table below.
3. Scroll the list of lines. Check three lines against your PDF: the date, the amount, and whether it is **Money in** or **Money out**. Pick one near the start, one in the middle and one at the end.
4. Compare the **opening balance** and **closing balance** in the Statement check box with the first and last balance in the PDF.

Statement	Lines it should read	Statement check should say
HDFC current account (Sri Satyanarayana Swamy Logistics)	161	No breaks. A note about a 28-day quiet stretch is normal.
ICICI Apr-Jun 2025	1,464	Green: correct and complete. Opening 86,88,102.96, closing 80,39,134.80.
ICICI Jul-Sep 2025	1,461	Green: correct and complete. Closing 86,32,016.74.
ICICI Oct-Dec 2025	1,292	**Red, 1 break, on purpose.** It points at line 1,100 on 16 Dec 2025. Please open that page of the PDF and tell us what the balance column shows there.
ICICI Jan-Mar 2026	1,610	Green: correct and complete.
SBI current account (Tritiksha)	179	No breaks. It says there are no lines in June 2025. Please check: is June really empty in your PDF?

Statement	Lines it should read	Statement check should say
SBI overdraft (Tritiksha)	110	No breaks. Balances are shown as minus numbers because it is an overdraft. That is correct.
Union Bank (Venkata Lakshmi Suppliers)	836	No breaks. A note about a 27-day quiet stretch is normal.
Indian Bank (2 accounts, Satkaarika)	not tested by us	**We have never seen these files.** Please tell us what you see.
Jajula John savings (Excel)	not tested by us	This file has a password. A box asking for the password should appear. Type it there. Tell us what happens.

A yellow note is fine, a red box is not. Yellow means "look at this". Red means "the numbers in the statement do not add up". We expect exactly one red box in this whole list (ICICI Oct-Dec). Any other red box is a bug: send a screenshot.

Tell us if

1. A file says **Failed**, shows a red **Held** box, or shows 0 lines. Copy the message.
2. The number of lines is different from the table. Write down what it says.
3. A line has the wrong amount, the wrong date, or Money in / out the wrong way round.
4. The upload takes longer than 2 minutes.

Test 2: Is a statement filed under the wrong client caught?

Last time every statement said *"The statement is for X, not ."* with a blank name. That was a bug and is fixed. Now try both situations:

A. Right client (should be accepted)

1. Upload the Union Bank statement under **Venkata Lakshmi Suppliers**.
2. It should be accepted. The Statement check should show **Account holder: The statement is for Venkata Lakshmi Suppliers.**

B. Wrong client (should be held)

1. Upload the same Union Bank statement under a **different** client, for example Tritiksha.
2. A red box appears: **"Held: not filed under this client."** It must name **both** clients, with no blank name.
3. Nothing from that statement should appear in the lines or in Recon for Tritiksha.
4. Press **Move to Venkata Lakshmi Suppliers**. The statement should move and its lines should appear under the right client.
5. Upload it under the wrong client again and this time press **It does belong to this client: use it**. The lines should now be filed.

Test 3: Excel files with several sheets

This is for the SBI Excel files and the books workbook for **The Moon**, the ones that failed before.

1. Upload the three SBI Excel statements for The Moon (as downloaded, do not convert to CSV).
2. Each should now read all its lines (before: 0, 0 and 18 of 292). Check the number of lines against the bank.
3. Upload the books workbook (the one with several sheets). Open it. It should say it read the **Bank Book** sheet, not the TDS Challans sheet.

4. In the opened file you will see **"Sheet to read"** with a drop-down. Choose a different sheet, then choose **Let FynHelp choose** again. The file should be read again each time.

Test 4: Does matching still show false "duplicates"?

1. For **The Moon**, open **Recon** and run **August 2025**.
2. Last time: 292 of 311 matched and 31 "Duplicate suspect" lines on UPI receipts. Now there should be **far fewer** exceptions, and the one real difference (the Rs 24,373 entry of 30-08-2025 with no bank line) should still be there.
3. Open two or three UPI receipts that are matched. The two sides should have the **same UPI number** and the same party.
4. Do the same for April to June (last time: 96 exceptions).

Please write down: how many matched, how many exceptions, and the reason shown on the first five exceptions.

Test 5: Sorting

1. Open any bank statement in **Documents**. The list of lines has columns **Date, Particulars, Type, In / out, Amount, Recon**.
2. Click **Type**. Lines should group together: all UPI, all NEFT, all cheques, all bank charges and so on.
3. Click **Type** again to reverse. Click **In / out**, then **Amount**, then **Date**. Each click should re-sort the list.
4. Tell us about any line whose Type looks wrong (for example, a salary payment marked as Cash). Send the line's description.

Test 6: Zoho Books (only if you used Zoho last time)

1. **Settings > Integrations > Zoho Books**: connect. After you agree on Zoho's page you should come back to the **Integrations** tab (last time you landed on General).
2. Open the client page for **Sahyadri Test Traders**. It should now list **Books: Zoho Books** and the bank account (last time it said "No accounting or payment source connected").
3. Delete one expense in Zoho, then press **Pull month** in FynHelp. The deleted entry should **disappear** from FynHelp, and the count in the message should match the count in the document.
4. In the CA portal's **Reports** list, open **Receivables Aging** for Sahyadri. It should now show the open invoice (Rs 23,800 from Anand Retail). Do the same for **Payables Aging** (the Rs 9,099.25 bill).
5. In **Exceptions**, export the missing expenses as a CSV for Zoho. Open the CSV: the **Paid Through** column should contain your Zoho bank account name, and a bank-charge line should have **no vendor**.
6. A client linked to **both** Tally and Zoho should show a red warning that books from two systems are being matched together.
7. Open a bank statement of a Zoho-only client. It should say **Books: Zoho Books** and should **not** offer "Post to Tally".

Not fixed yet, so do not report these again: posting into Zoho from FynHelp (still read-only), the "Tax Payable" label on pulled expenses, and the column names Zoho's importer asks you to map by hand. For those two we need one thing from you: please send us a **sample expense import file downloaded from Zoho itself** (Purchases > Expenses > Import Expenses > sample file).

Test 7: The page that hung

1. Open the CA portal and move between a few pages (Portfolio, Clients, Documents).
2. A page should never sit on "Loading CA portal…" for minutes. After about 12 seconds it should give up waiting. Write down any page that still hangs, and for how long.

What to send us

One short message per test is enough. Use this table:

Test	Pass / Fail	What you saw (copy the exact words)	Screenshot?
1. Statements read			
2. Wrong client held			
3. Excel sheets			
4. Matching			
5. Sorting			
6. Zoho			
7. Hanging pages			

Thank you. Every message you send us, good or bad, makes FynHelp better for the next CA firm. If you are stuck on any step, stop and send us what is on the screen.
